

TESTED SETTINGS, READY BEFORE YOU SHOOT

NEVER GUESS YOUR SETTINGS AGAIN.

Rated results from every test your team has run are organized by room and gear — a real starting point, not a guess.

WITHOUT TESTED STARTING POINTS

A volunteer walks into the sanctuary Sunday morning, camera in hand, and starts guessing — ISO, shutter, aperture — hoping this week's settings work as well as last week's did.

WITH CAPTURING THE MOMENT

Pick the room and the camera-and-lens combination. See exactly what the team already tested and rated — Preferred down to Avoid — and start from there instead of from zero.

● MAIN SANCTUARY — 24-70MM F/2.8

ISO 3200	Preferred
1/125 sec	Preferred
f/2.8	Acceptable

HOW IT WORKS

01

Run a quick test

A short guided session for a location and gear combination — ISO, shutter, aperture, whatever's needed.

02

Rate what you find

Mark each result Preferred, Acceptable, Situational, or Avoid — building a shared, honest reference.

03

Start from there next time

Anyone on the team opens the same combination and finds a ready-to-use starting point waiting.

**Confidence built
one test at a time.**
